

TEACHING BREAKTHROUGHS

by:

Lorena R. Tarrayo

Teacher III, Pablo Roman National High School, Senior High School

Highlighting the best teaching strategies could help provide teachers with the insights and ideas that would enhance their teaching prowess.

Game-based Learning. This is teaching through the insertion of useful games in activities. There are certain parts of the lesson wherein a teacher would utilize games in order for the students to enjoy and at the same time learn.

Student-Centered Approach. This strategy will make the student as the center of the educative process. It connotes that the targets and activities are formulated and done for the benefit of the learner. It also ensures the learner's development and progress.

Teacher-centered Learning. In the teacher-centered learning, the teacher is the primary mover during the class session. This does not mean that the teacher is the beneficiary. The teacher will be the one to act and to model for the students to imitate and follow.

Project-Based Learning. This is where the students focus closely to certain activities that need to be investigated, scrutinized, discovered, examined, and evaluated. The teacher lets the students find solutions and formulate inferences.

Social Emotional Learning. This is where the teacher lets the students mingle and work together with their classmates or peers. This is giving importance on how will the learners socialize and adapt to others in the learning process.

Collaborative Learning Strategy. This entails the collaboration among learners. The teacher forms them into creative group where they will pool or combine ideas together and be very productive.

Inquiry-Based Learning. This where the teacher lets the students acquire knowledge and skills in school through inquiring, investigating, or exploring in order to address a question or a query.

Teaching Breakthroughs are considered useful and at the same time fruitful.
