

THE CHALLENGES FACED BY A TEACHER

by:
LADYLYNN S. VELASCO
Teacher III, Balsik National High School

Despite the fact that it's an outstanding profession, teaching may sometimes be difficult. The contemporary period has seen a substantial change in the role of instructors due to the advent of new teaching methodologies and the way that digital and smart learning have permeated the educational landscape. These days, it's challenging for educators to keep up with developments in a variety of professions, including science, medicine, education, the arts, and other fields. As a result, they must regularly upgrade their skills and expertise, which is a top priority in today's world.

A teacher is also an educator. They have the opportunity to have a big impact on the students, but this opportunity also comes with a lot of challenges. The following are the main challenges that teachers face:

- 1) Being connected with their students.
- 2) Being conscious of the diverse abilities and learning preferences of the students.
- 3) Supporting and inspiring them when they do poorly and come under criticism from their parents and peers.
- 4) Creating a fruitful channel of communication between the pupils, parents, and administration

A teacher needs to have a strong relationship with the students. A teacher should try their hardest to become well-known to their students. The discourse should extend much beyond the walls of the classroom. Above all, a teacher should be a friend, and it is

their responsibility to create a welcoming and positive atmosphere for the kids. Instructors must be approachable and available, and pupils ought to feel free to discuss any subject and express any doubts they may have. A teacher's receptive attitude and open mind will go a long way toward helping them get to know their pupils well.

The hardest thing for any teacher to do is to understand the many ways that their students learn. Students' abilities to understand, recall, focus, study, and write vary, as do their interests in a broad variety of subjects. Even a math whiz might find it difficult to understand biological ideas. Thus, even when a kid is gifted in other areas, they may perform well in extracurricular activities like athletics but poorly in the classroom. Some students are sluggish learners who struggle to understand the content being taught in class, while some are exceptionally intelligent and hardworking.

The most challenging task for any teacher to do is to understand the many ways that their students learn. Pupils differ in their interest in a variety of subjects as well as in their grasping, remembering, attention, writing, and learning capacities. Ideas in biology might be difficult for even a child who does really well in maths. Thus, even when a kid is gifted in other areas, they may perform well in extracurricular activities like athletics but poorly in the classroom. Some students are sluggish learners who struggle to understand the content being taught in class, while some are exceptionally smart and diligent.
