

SHAPING THE CHILD'S FUTURE THROUGH EDUCATION

by:

Maria Razzel R. Basi

Teacher I, Mandama Elementary School

The field of education performs a vital role in the life of every individual in the society. It serves as the pathway to one's development, learning, and progress. With it, the child is open to a lot of opportunities and discoveries. Now, that we are in the digital age, learners have a better future ahead of them.

Shaping the child for the future may be attained through the following areas:

Essential knowledge and information are being embedded in each learner. Through these vital things, the cognition level of the child is being increased, thus developing a stock knowledge that will be useful in the future.

There are certain subject skills or competencies being taught to each child. These are instrumental in sharpening one's abilities in order to face the challenges of different learning areas and to be well-competent in various areas of learning.

Education also shares life skills. These skills aid a child for survival. The school teaches practical knowledge and ways in order for a child to become strong and resilient in different undertakings that need to be faced as part of man's living in the community.

The school provides basic education in preparation for further education. This means that the rudiments of learning are being implanted in every child so that he or she will be prepared to hurdle the challenges that secondary and tertiary education may endow.

Education provides the techniques for business or management. Nowadays, the teacher instructs every child the ways on how to manage small businesses or enterprises. This prepares the learner to be responsible in handling a business and cultivates his mind in handling a certain income - generating activity.

The school serves as a great venue for the learner's readiness to work someday when becoming an adult. This connotes that gradually the child is being exposed to the workplace. The child is being inspired to pursue a profession based on one's inclination.

Education teaches proper values. It is in school where the child learns fully the values of integrity, honesty, respect, love, charity, and among others. This means education sets the good character of every individual.

At present, things are made fast through the advancement of technology. The digital era offers the child a future in computer stints that will be useful in several areas of life and work.

Truly, we can say that through the provisions of education, the life of every child or learner will be shaped for the better, even for the better!
