KEY CHALLENGES AND SOLUTIONS TO PREVENTING SCHOOL DROPOUTS

by:
Carl Jones B. Dela Cruz
Teacher II, Pablo Roman National High School

Globally, school dropout rates remain a major problem for educational institutions. For a variety of social, economic, and personal reasons, many students drop out of school before finishing their education. Their general quality of life is negatively impacted by these dropouts' frequent lack of employment options and increased chance of poverty. Developing practical solutions that support student performance and retention requires an understanding of the causes of school dropouts.

Financial hardship is one of the main causes of student dropouts. Many families find it difficult to pay for their children's education, which forces some students to start working early rather than finish their school. Furthermore, some students lack motivation as a result of subpar academic achievement or an unsupportive learning environment. Because they may feel alienated or unsupported at school, social difficulties including bullying, peer pressure, and family troubles can play a role in students quitting school.

Schools and communities must carry out focused interventions to address these issues. Giving low-income families financial support, such free school meals or scholarships, might lessen their financial burden. Making courses more interesting and taking into account various learning styles are two more ways that schools may enhance their teaching methods. Additionally, creating a supportive school climate with counseling services and anti-bullying initiatives may make children feel secure and encouraged throughout their academic careers.

Another important factor in avoiding dropouts is parental participation. Students often do better and attend school longer when their parents are actively involved in their education. Parents should be encouraged to engage in school activities and decision-making processes, and schools should improve communication with them. Furthermore, mentoring programs that pair students with career counselors or role models can provide them the drive and assistance they need to finish their education.

Teachers, parents, legislators, and the community must work together to address school dropout rates. Schools may provide a positive learning environment that motivates students to stick around and achieve by determining the underlying reasons for dropouts and putting effective policies into place. Every child can have the chance to finish their school and create a better future with the correct interventions.
