

“THE MODERN TEACHER: ADAPTING TO CHANGE”

by:

Gillian D. Mallari

Teacher III, Kataasan Elementary School

The rapid transformation of the modern world is undeniable. Failure to keep pace with technological advancements and equipment updates results in falling behind. Adapting to these changes is challenging, yet it is essential for staying current with modern developments. Digital technology is everywhere and is definitely changing the way we learn and teach in ways we've never seen before. The transformations have caused some individuals to stagnate, while others are making progress by moving forward. And while good practice is necessary for an appropriate transition to the digital transformation era, it will require time, motivation, technology tools and infrastructures.

Education has been greatly affected by recent changes. Teachers face significant challenges whenever the education system changes. Although it can be difficult, teachers work hard to adjust to these changes because they care about their students and want to support them. According to Mardiana (2020), to adapt to the technological change, educators must have attitudes to learn technology, knowledge in technology, ability, and skills to change them into qualified lecturers. This is one proof that teachers must be flexible. Ready and prepared for a lot of changes that are needed in the chosen field.

Even though technology offers many advantages, teachers often encounter problems like technical issues and not having enough resources, which can make it harder for them to adjust (Francom & Pinkney, 2021). To deal with these issues, teachers need to be willing to learn about technology, understand how it works, and know how to use it effectively in their teaching (Madiarna, 2020). It's important for teachers to keep learning and improving their skills so they can adapt to new educational standards based in article

from (Acacia, 2025). Another article from (LinkedIn, 2025), by focusing on skills like being good with computers, communicating well, understanding emotions, and being flexible, teachers can make a bigger difference and stay effective in the classroom.

Being adaptable in teaching means more than just learning new things; it's about changing how we teach to help our students learn better (Smith, 2024). Teachers have to find a balance between following the school's lesson plans and adjusting their teaching to fit the different needs of their students and the special conditions of their classrooms (Johnson, 2024). This ability helps teachers give their students the best learning experiences. Also, schools are now focusing on teaching skills like thinking carefully and being flexible to help students face future challenges (Davis, 2025).

As we move forward in 2025, teachers have a fantastic opportunity to grow both personally and professionally. By embracing new technologies, acquiring new skills, and being adaptable, educators can enhance their teaching methods and create inclusive classrooms where all students feel welcome. This approach aligns with the idea that continuous learning and flexibility are key to improving teaching practices and fostering a supportive learning environment, in accordance to this article from (LinkedIn, 2025) about education in 2025. Meaning, it's important for teachers to keep learning and growing so they can meet the changing needs of their students and the education system. To succeed in today's changing education world, teachers need to be able to adapt, handle challenges, and keep learning.
