

GLOBAL WARMING: GOD'S CREATION OR MAN'S CREATION?

by:

THELMA M. DATU

Teacher III, Sapa Elementary School

With Majestic Hands, HE formed it, With Loving Hands HE Loaned it, With Careful Hands... We must protect it.

In the beginning GOD created the universe, it was formless and empty. God created the universe to be the dwelling place of all creatures that He made according to His image. When we go back to the time that God created all the images it goes like this... God created day and night, He made the seas and land, God created the moon and stars, He created all the living organisms both in land and water and on the last day He created Adam and Eve. He rested after His creations. The earth looked amazing with all the things God gave life, He called it paradise. As you can read the bible there's no such thing that God created Global Warming. If it is not creation, then who created it?

Experts said that global warming is worsening. Global warming occurs when carbon dioxide (CO₂) and other air pollutants collect in the atmosphere and absorb sunlight and solar radiation that have bounced off the earth's surface. Normally this radiation would escape into space, but these pollutants, which can last for years to centuries in the atmosphere, trap the heat and cause the planet to get hotter. These heat-trapping pollutants- specifically carbon dioxide, methane, nitrous oxide, water vapour, and synthetic fluorinated gases- are known as greenhouse gases, and their impact is called "the greenhouse effect".

Based on the reports, we are suffering from the greenhouse effect. The average temperature of earth's surface continuously increasing due to greenhouse gases that collect in the atmosphere like a thickening blanket, trapping the sun's heat and causing

the planet to warm-up. Greenhouse gases keep heat close to the earth's surface making it liveable for humans and animals. However, global warming is happening largely due to emission of gases and fossil fuels (natural oil, gasoline coal).

In addition to the facts, human influences are the number one cause of global warming, especially the carbon pollution we cause by burning fossil fuels and the pollution capture we prevent by destroying forests. Higher temperatures are worsening many types of disasters, including super typhoons, heat waves, floods and droughts. A warmer climate creates an atmosphere that can collect, retain and unleash more water, changing weather patterns in such a way that wet areas become wetter and dry areas drier.

Even though we can never stop the worst effect of it but at least we can delay or lessen the gravity of global warming. Still there's hope if we work hand-in-hand. Start with our self by having an advocacy nurture the nature to save the next generation.

We can capitalize our education and advocacy to convince our family, friends, relatives, classmates, teachers and others that we can bring changes to the nature that benefits us especially the future generation. Our education can serve as light to other individual. It also leads us to deliver awareness, compassion, consciousness to every living things. We can educate them, share our insights, the reality of recent reports about global warming the pros and cons of it. Education is the best way to be aware for better understanding of the worst consequences of it. We can act now before our guilt kills us

Now, do you still consider earth, as the best dwelling place that God created for us?
