

GO AND MULTIPLY

by:

THELMA M. DATU

Teacher III, Sapa Elementary School

The LORD said , “Go and Multiply”.

This piece of advice is one of the verses we can find in the Holy Book of Genesis 1:28, when Adam and Eve were prohibited by God to stay in the Paradise, God said this words.

Have you seen the commercial of the sampaguita vendor sponsored by National Statistic Office now Philippine Statistic Authority. She expressed her ingratitude for her parents to the current situation that she engaged with. She needed to sell sampaguita on the street just to help her family instead of going to school. The commercial clearly conveyed the idea of being an irresponsible parents. Plan your family not planting children to multiply them. It said “Kung Mahal Nyo Kami dapat Magplano Kayo”! Have we asked our self as a parent, do I really love my children? If you do, you must plan their future before the time you conceive them in our womb before they cast their first cry.

Based on the latest survey of PSA (Philippine Statistic Authority), the current population of the Philippines is more than hundred millions (114.16 million as of 2024) In fact, our country is included as 13th place in the most populated country in the world. Can you imagine everyday 3 babies were born every minute and 79 deaths every hour or approximately one death per minute. Still the number of life live domineering the number of life loss

Our government specially Department of Health (DOH), made a wide information dissemination through commercials, social media platforms, reaching out to schools to

educate the parents, guardians and students about family planning. Teens, students, out-of-school-youths are the most vulnerable agent of society in producing another human life.

Education can save the day! Education about the terms of conceiving is one of the best solution to lessen the continues growth of population. The awareness and understanding of this individual might be a great help to bridging the problem.

Our government is seeking for the best and yet immediate alternative to stop or even lessen the rapid growth of population. Population is refers to us, the summation of all living organisms of the same group of species, which live in a geographical area and have the capability of interbreeding. We reached the point of we suffered a lot, homes built-under bridges, increased the number of unemployed, poverty, hunger, crimes continuously bloating. The number of dropped-outs and out-of-school youths, they need to provide for their families. Early pregnancy and prohibited drugs are rampant.

The success of the future lies to the hands of the youth. We need to plan for brighter tomorrow. The best inheritance we can give to our children is "Education", that no one can ever take it away from them. Start today!

Think... Choose... Do we really need to go and multiply? Do something...
