

## ARTIFICIAL INTELLIGENCE: THE VIEWS OF DIFFERENT GENERATIONS

by:

**Arnold M. Dollente**

*Teacher III, Mariveles National High School – Batangas II*

When people think of Artificial Intelligence, most people will answer it is about the futuristic approach, robots, some may say negative about it, and some may even raise their eyebrows. They may even think that robots will dominate the world and even the minds of the people. Since the movies give us different perspectives of the dominion of AI which will soon dominate the entire world, the AI has negative connotations, and these impressions left marks on the minds of the seasoned ones. However, the younger ones such as the generation alpha, beta and generation c, would like to disagree with this idea. Most of the students enjoyed the idea of having the AI and they consider this their friend. If the seasoned ones said that most of this would make people lazy, dull and not interactive, the perspectives of the younger generations reiterate that this is very beneficial to them. Most of them, according to the interviews conducted by the author, believed in the following:

Younger Generations:

1. “Yes, we believed that the AI can really help us in our academic endeavors such as our assignments, research paper, action research, film review and such, it is really a great help for us, younger generations”
2. “ People can say that, AI has negative consequences, but we believed that it is always according to how one chooses to use the AI, it will always be dependent on how fast one can learn and how fast one can learn ethics with the AI”

3. “We believed in the ability of the people to see the goodness in everything, so with this, I think the AI has its downside but most specially it has its beauty, we have to explore it more, it will be such waste, if not”

4. “We think without AI, internet life will be put into such shame, since that is exactly the value of the AI, to help us in our daily needs”

5. “younger generations have this language, which is separate from older generations, so using AI is one of these, and it is great!”

On the other side, Artificial Intelligence from the perspectives of the Baby Boomers, and Generation X believed that there is more negative than positive effects of the AI.

Most of their answers are reflected below:

1. “For us, older generations, the seasoned ones, having AI means that we can no longer do the things we previously do such as reading physical books and walking with the dogs. Everything is on gadgets now, which is not good for the body and mind”

2. “How do we do that without the usage of real physical strength and physical intelligence? We do not need to rely on robots and other gadgets, we can do this on our own, we just need to be patient and industrious”

3. “Thinking of our next generations make me feel uncomfortable since all are relied upon AI, which I think is not okay”

4. Why do we need AI, it has negative effects on the mental and physical health of the students and the people, we had started without the intervention of this, we can still do this without the AI”

It could be therefore analyzed that Artificial Intelligence values and purpose varies according to the perspectives of people and how they are seen by many generations. The generation always has its say on what to do and how to conceive ideas for academic matters.
