

THE SCHOOL AS A FOUNDATION FOR LEARNING, GROWTH, AND CHARACTER DEVELOPMENT

by:

Katrina C. Rodriguez

Teacher I, Samal North Elementary School

The school is a place where students can learn and improve their skills, talents, behavior, and abilities. They can learn more here that will make their health and personality better. Parents send their children to school to learn, study, and have fun with other kids. School also gives children a lot of chances to learn and use their brains.

We can say that children learn to read and write when they are very young. They start to learn the alphabet and numbers, and they can even solve some simple math problems. The school is also a place to learn about facts, values, and even history and politics. It gives every child a chance to learn and grow.

School is also helping kids learn how to get along with others. It gets the kid ready to deal with all of life's problems. Kids like having friends. Every day, they like going to school to learn new things and meet new people. There are a lot of different programs at schools that can help each student learn more and do better at what they do. They tell each child to do their best, learn more, and pick up new skills so that they can be proud of their school. Every school works to make its classrooms and other learning spaces better and bigger. Also, there are better ways to learn available.

So, we can say that school gives kids everything they need to grow and become better people, including their personality, behavior, attitude, skills, talents, abilities, values, and more. Parents should also pay attention to the school, not just the teachers. Let's help our kids reach their goals and dreams by encouraging them. In the end, helping the school is like helping our kids.
